In the latest treatment options of dermatological problems & diseases surgery also plays an important aspect of successful treatment of some of the common conditions such as warts, corns, molluscum & many other conditions of skin. So, it is very much necessary to know the recent updates, Innovations & surgical modalities of treatment which are everyday newly being discovered. Hence it is a need for a separate article or journal to highlight the recent advanced surgical options of treatment which have been updated often.

In addition to this, in order to know latest development in surgical techniques of treatment of skin conditions it is also very important to attend various national & international level CME & conferences to know accurately the latest discoveries available. Secondly, it is also a necessity to know about the various aspects of research, based on which we can focus our importance to a particular entity regarding research aspects, & how we, as a person, can contribute to the latest discoveries & latest need for newer treatment options based on the upcoming latest common dermatological diseases. We can also focus over research aspects to a particular target such as vaccines, in order to ease the prevention & treatment aspects as a mass strategy, therefore helping to overcome common easily treatable vaccine preventable skin conditions as a mass prophylaxis, or by inducing the development of herd immunity. When it comes to therapy, therapeutic approaches & the way we see the steps towards the treatment of common conditions should be made with ease, and we should

also try to discover the therapeutic usage of commonly used drugs & their usefulness to other skin conditions where we have not tried their action potentials.

This way we can extend the therapeutic usefulness of commonly used drugs to a wider range & broad spectrum of diseases & actions. So, it is important not only to read the journals online but also the print which are available regularly. Hence, I highly recommend to publish these topics & the approaches towards various aspect as a separate journal under the title of 'Journal of Dermatologic Surgery, Research and Therapy' as a monthly journal or a regularly updated journal on a regular basis, so that we can learn & update our knowledge & help in the progress & improvement of the various treatment aspects of common skin conditions. As a professor in a teaching hospital, as an examiner for postgraduate dermatology students, as an exam paper setter for universities and presenting scientific papers in various international & national conferences, I find this Journal of Dermatologic Surgery, Research and Therapy is a very useful platform for beginners in dermatology, serious researches in dermatology & also dermatologic practitioners worldwide. I highly recommend this journal for all the above said medical graduates and hopefully this will be recognized very soon by PubMed and other important indexes. Time is changing. How much things alter will measure the change. We all should keep adapting to these changes as every milliseconds show changes in the living bodies be it plants, trees, animals or for that matter ourselves human beings.
